

Hong Kong Squash League
Calculation of Divisional Ranking

Players will receive points for each league match played based on the game score. The total number of points gained will be divided by the number of matches played. Players are ranked within the respective division based on the points calculated.

The following table shows the points given based on the game score:

Game Score \ Position	3-0	3-1	3-2	2-3	1-3	0-3
1	27	24	21	18	15	12
2	24	21	18	15	12	9
3	21	18	15	12	9	6
4	18	15	12	9	6	3
5	15	12	9	6	3	0

For example, if a player played at No.1 position and won the match at 3-1, he would get 24 points for this match. Then on the second match, he played at No.3 and lost at 2-3, he would get 12 points. The average points for this player is $(24 + 12) / 2 = 18$ points. We will produce a ranking list of all players registered in the respective division based on the points gained by each player. The ranking list will be updated regularly and at the same time when the league results (for teams) are updated.

The same points table shown above will be used for all divisions. A ranking list will be provided for each and every division in the Main, Ladies and Masters League. For player(s) who have in more than one group, e.g. both in the Main and Masters league, his name will appear in the ranking list for the respective divisions he played for both in the Main and Masters League.

The first ranking list will be issued after the League Office has gathered 5 weeks' league results, i.e. around mid-November.
